Job Application Tracker Project Proposal

Title

Job Application Tracker

Team Members

1. Jack Zhang (yz6973)

Description of the Project

The Job Application Tracker is a system designed to help job seekers efficiently manage and track their job applications. The system will allow users to manage their profiles, input details of job applications, track the status of each application, set reminders for follow-ups, and generate reports. This project aims to improve the job seeking experience for intended users.

List of Proposed Features

1. **User Authentication and Profile Management**

   1. Description: Users can create accounts, log in, and manage their profiles. Each user will have a personalized dashboard displaying their job application activities.

2. **Job Application Entry**

   1. Description: Users can enter job application details, including the company name, job title, date of application, job description, application status, and contact information.

3. **Status Tracking**

   1. Description: Users can update the status of each job application (e.g., applied, interview scheduled, offer received, rejected). The system will provide a visual representation of the application stages.

4. **Reminders and Notifications**

   1. Description: Users can set reminders for follow-ups and receive notifications for upcoming deadlines or events related to their job applications.

5. **Reports and Analytics**

1. Description: The system will generate reports and analytics on the user's job search activities, including the number of applications submitted, interview invitations, and offers received.

(Optional) Technical Approach

- **Programming Language**: Java
- **UML Diagrams**: Use Case Diagrams, Sequence Diagrams, Class Diagrams
